

DURAGAL® FLATS

All DuraGal® products provide a superior level of corrosion resistance through the unique chemical composition of the zinc coating, which also contains 3% Magnesium and 2.5% Aluminium. This advanced galvanised coating allows consistent and uniform quality during manufacture, can be produced in high volume at any length and provides an attractive, spangle-free surface finish that removes the need for secondary galvanising operations.

DuraGal® Flats are readily available in an extensive range of sizes and thicknesses, as shown below:

Designation			Pack Size	Mass (kg/m)
D (mm)	B (mm)	T (mm)		
6.0 metres				
50	n/a	4	57	1.582
	n/a	5	45	1.975
65	n/a	5	36	2.567
75	n/a	4	38	2.373
	n/a	5	32	2.962
100	n/a	4	28	3.165
	n/a	5	28	3.950
	n/a	6	26	4.829
130	n/a	5	28	5.134
150	n/a	5	28	5.924
	n/a	6	24	7.243
200	n/a	6	28	9.657
250	n/a	5	23	9.874

DuraGal® Profiles

THE DIFFERENCE IS DURAGAL

NEED SOMETHING DIFFERENT?

Australian Rollforming is a custom metal rollforming specialist with the capability to rollform an almost infinite variety of profiles using a wide range of metals.

DuraGal® Flats can be manufactured to your desired dimensions and lengths with in-line hole punching or edge bevelling also available (non-standard items may be subject to minimum order quantities). Additional technical specifications, including section properties, are available on request.

Contact us to discuss your requirements.
